

Title:

Network Intrusion Detection System Using Snort

Objective:

To deploy and configure Snort IDS for monitoring network traffic and detecting suspicious activities.

Tools Used:

- Kali Linux
- Snort IDS
- Nmap
- Kioptrix

Methodology:

1. Installed Snort IDS.
2. Verified network connectivity.
3. Configured Snort on eth0.
4. Generated traffic using Ping and Nmap.
5. Monitored and analyzed traffic.

Results:

Snort successfully detected TCP and UDP scan activities generated against the Kioptrix target system.

Conclusion:

The IDS successfully monitored network traffic and detected reconnaissance activities.
